

## What is SecureMode Rapid Restore™ PC?

SecureMode Rapid Restore PC is an industry leading SecureMode One Button Restore® solution for local recovery of stand alone workstations.

### SecureMode Rapid Restore PC Benefits

#### Rapid Recovery from:

- Software, Driver and Data Corruption
- Virus Infection
- Unintentional Software and File Deletion

### SECURITY AND DATA INTEGRITY

#### High Performance One Button Restore® Manager

The One Button Restore Manager is the backbone of SecureMode Rapid Restore PC's image and data management technology. It is accessible from the Windows and Pre-OS interfaces.

#### Integrated Local Recovery

High performance One Button Restore from a local Safety Partition requires no additional hardware or media.

#### Locked File Manager

Provides real time backups by creating snapshots of the system, including open and locked files, to minimize the exposure of lost data.

### EASE OF USE

#### Multiple Restore Points

Flexibility is provided by creating up to 3 different restore points for data recovery.

#### User Friendly "One Button" Hotkey Backup

Provides users the ability to backup and restore a system with a simple single key sequence.

#### Over install Support

Supports installation over previous versions of Rapid Restore, including SecureMode Rapid Restore PC/PRO and IBM Rapid Restore Ultra.

### PERFORMANCE AND EFFICIENCY

#### High Performance Linux Pre-Boot Manager

Utilization of 32-bit Linux for Pre-O/S System Operations results in 2X increase in performance.

#### Xpoint Single Instance (XSI) Optimization

Time duration of backups and space requirements are significantly reduced by utilizing XSI high performance technology.
